

MARKETING STRATEGY & BUSINESS DASHBOARD.

12 TASKS: PERSONAS, CAMPAIGNS, PRICING, RETENTION & A BUSINESS DASHBOARD

Turning the Module 7 cluster output into business-facing strategy — and auditing every task for whether its logic actually matches the scale of the data it received.

AI LAB 99

TASK STATUS AT A GLANCE — 12 TASKS									
#	Task	Status			#	Task	Status		
1	Review Segments	OK			7	Retention Strategy	OK		
2	Customer Personas	BROKEN			8	Reactivation Strategy	BROKEN		
3	Business Opportunities	BROKEN			9	Campaign Action Plan	OK		
4	Marketing Strategy	OK			10	Strategy Matrix	BROKEN		
5	Product Recommendation	OK			11	Business Dashboard	PARTIAL		
6	Pricing & Discount	OK			12	Management Summary	MISSING		

⚠️ ROOT CAUSE

Classification rules (**income ≥ 70000, spending ≥ 1000, recency > 60**) were written for raw-dollar data, but every numeric column is still **StandardScaler output** (range ≈ −3 to +3). Every threshold silently fails the same way for both segments.

02/03 — PERSONAS & OPPORTUNITIES

BROKEN

Both segments get **identical labels** despite being opposite ends of the spectrum:

Segment	Income	Result
Premium Loyal (+0.67)	Low	Low Spending, Rare Purchases, Low CLV
Budget Buyers (−0.80)	Low	Low Spending, Rare Purchases, Low CLV

01 — SEGMENT OVERVIEW

1,111 Premium Loyal vs. 927 Budget Buyers

Naming caveat: Cluster 1 = "Digital-First Buyers" in Module 7, "Budget Buyers" here — same customers, inconsistent name.

04–07, 09 — STRATEGY TABLES

OK

Name-based logic ("Premium" / "Budget" in segment name) correctly differentiates both segments across marketing, product, pricing, retention, and campaign tasks:

Segment	Discount	Primary Product	Channel
Premium Loyal	5%	Wine	Email
Budget Buyers	25%	Sweets	SMS

Preferred marketing channel by segment

Discount percentage by segment

08 — REACTIVATION

EMPTY

Recency > 60 on a z-score column (range ±1.7) finds **0 inactive customers**. The entire reactivation plan table is built with zero rows.

10 — STRATEGY MATRIX

EMPTY

Chained inner-joins with the empty Task 8 table erase **every row from Tasks 4-7 and 9 too** — final matrix: 0 rows, 10 empty columns, despite each source table being valid on its own.

07 — RETENTION

Follow-up frequency by segment

11 — DASHBOARD: MISLEADING TOTALS

Charts render correctly, but summary totals sum z-scores instead of currency:

−1.9

"TOTAL REVENUE"

0.0

"AVG INCOME"

"Revenue" by segment — note the negative bar

12 — MGMT SUMMARY

MISSING

Section header only — notebook ends with no content. Should be authored after Tasks 2, 3, 8 & 10 are fixed.

TOP RECOMMENDATION

Inverse-transform Income, Total_spending, Total_Purchase & Recency back to real units before any threshold rule runs — this single fix repairs Tasks 2, 3, 8, 10 and the dashboard summary.
